EXPERIENCE

Data Engineer

July 2023 – Present

LUMIQ

Pune, India

- Spearheaded the development of an **AWS serverless pipeline** and deployed using SAM for automated PDF financial statement processing in **Python, integrating LLMs** for intelligent data extraction and transaction classification, **dropping costs by 70%** for a leading bank.
- Redesigned and migrated data processing pipelines **from AWS Glue to PySpark**-based jobs on **AWS EMR**, orchestrated via **Apache Airflow**, achieving over **35% cost savings** and improved resource efficiency.
- Built an event-driven pipeline using AWS S3 and Lambda to trigger real-time transformations, processing **10K+ files daily** and reducing data latency by 40%, thereby enabling faster downstream analytics.
- Developed custom **DBT test macros** to automate complex data quality checks, **reducing manual validation efforts by over 50%**. This enhanced testing coverage, data reliability, and CI/CD efficiency in the analytics pipeline.
- Implemented end-to-end **Data Vault 2.0** modeling—from raw data ingestion and **SQL-based transformations** to building facts and dimensions—ultimately storing the curated data in Amazon Redshift for seamless consumption by BI applications.

Software Engineer Intern

March 2023 – June 2023

LUMIQ

Pune, India

- Conducted an **in depth comparative analysis** on data lake formats (Hudi, Iceberg, Delta Lake) leading to more efficient CRUD operations on streaming datasets, optimizing data storage and retrieval efficiency by 20%.
- Strengthened workflow reliability by **developing a robust retry mechanism** for Hive and Spark jobs, minimizing failures and **increasing job success rates by 45%**, ensuring smooth pipeline execution.

PROJECTS

AWS-WhatsApp-Bot

- Engineered a conversational **AI interface on WhatsApp**, integrating 3 core technologies (LLM via LangChain, AWS Lambda, and Twilio) to enable **natural language control over AWS resources**, facilitating intuitive command execution.
- Streamlined cloud resource management by providing **remote operational control**, which significantly simplified workflows and **potentially reduced manual cloud resource management time by up to 25%**.
- Implemented a serverless architecture using **AWS API Gateway and Lambda** to process WhatsApp messages and providing on-the-go control of AWS services, providing **24/7 on-demand operational control**.

Yet-Another-ETL

- Developed a comprehensive PySpark-based ETL framework facilitating loading of data into diverse sources - including SQL, NoSQL, and Streaming Data, expediting efficient data lake setup.
- Empowered users to effortlessly define robust data pipelines using YAML files, substantially minimizing the effort required to establish a fully functional data lake from the ground up.

EDUCATION

Kalinga Institute of Industrial Technology

June 2019 – May 2023

Bachelor of Technology in Information Technology (**CGPA: 9.41**)

Bhubaneswar, Odisha

Relevant Coursework: Data Structures, Algorithms, Operating Systems, DBMS, and Computer Networks.

TECHNICAL SKILLS

Languages : Python, PySpark, SQL, Bash, C++

Data Engineering : AWS Technologies, GCP (BigQuery), Airflow, DBT, Hive, Kafka, Spark Streaming, Docker

Core Competencies : Data Modelling, Data Warehousing, CI/CD, SQL Optimization, Big Data

CERTIFICATIONS

- AWS Certified Developer – Associate
- Snowflake SnowPro Core
